Summary

Computer Science and Engineering undergraduate with a strong foundation in Software Development, Cybersecurity, Data Structures and Algorithms, Database Management, and Artificial Intelligence. Hands-on experience building and deploying full-stack applications, AI-powered systems, REST APIs, and cybersecurity solutions using Python, Java, SQL, FastAPI, LangChain, Streamlit, PostgreSQL, and Docker. Experienced in RAG-based applications, semantic search, data transformation, secure software development. Seeking new opportunities in Software Development to apply my technical skills and contribute to impactful software solutions.

Technical Skills

Programming Languages: Python, Java, SQL
AI & Machine Learning: LangChain, Retrieval-Augmented Generation (RAG), Sentence Transformers, FAISS, Semantic Search
Databases: SQL Databases, Vector Databases
Cybersecurity: Network Security, Vulnerability Assessment, Threat Detection, Security Monitoring, Wireshark, Nmap, Kali Linux, Cryptography, John the Ripper
Developer Tools: Git, GitHub, Docker, Hugging Face Spaces, Render
Core Computer Science: Data Structures and Algorithms, Object-Oriented Programming, Database Management Systems, Computer Networks, Software Engineering

Projects

Medical AI Chatbot *[View Project]*
Python, LangChain, Groq, Hugging Face, Streamlit, FAISS, Sentence Transformers

- Engineered and deployed an LLM-powered Retrieval-Augmented Generation (RAG) application using Python, LangChain, Groq, Hugging Face, and Streamlit for context-aware medical question answering.
- Implemented a semantic search pipeline using Sentence Transformers embeddings and FAISS vector database to retrieve relevant medical knowledge from document-based sources.
- Built document ingestion, text processing, embedding generation, vector indexing, and contextual retrieval pipelines for medical reference PDFs.
- Integrated the application with Hugging Face Spaces and implemented a production-ready deployment workflow for publicly accessible real-time usage.

Multi-Source Candidate Data Transformer *[View Project]*
Python, FastAPI, Uvicorn, PyPDF, Docker, REST APIs, HTML, CSS, JavaScript, Render

- Built an automated candidate data processing pipeline using Python with PyPDF, CSV, and JSON parsers to extract structured information from recruiter files, ATS exports, and resume PDFs.
- Engineered a custom deduplication engine that identifies and merges duplicate candidate profiles using email, phone number, and name matching with accuracy-based scoring.
- Implemented a configurable JSON projection schema enabling users to select export fields and dynamically standardize candidate data structures.
- Developed a full-stack drag-and-drop web application using FastAPI, Uvicorn, HTML, CSS, and JavaScript; containerized the application with Docker and deployed it on Render.

Education

Noida Institute of Engineering and Technology — Greater Noida, Uttar Pradesh
Bachelor of Technology in Computer Science and Engineering | CGPA: **9.08/10** — 2023 – Present

Shanti Niketan Senior Secondary School — Muzaffarpur, Bihar
Intermediate | 81.60% — 2022

Shanti Niketan Senior Secondary School — Muzaffarpur, Bihar
Matriculation | 90.40% — 2020

Certifications & Achievements

- Shortlisted for Indian Army SSC (Tech)-68 Entry – Qualified for the Services Selection Board (SSB) Interview.
- Solved 200+ Data Structures and Algorithms problems on LeetCode.
- Solved 240+ Data Structures and Algorithms problems on TakeUforward.
- NCET Certified: Data Scientist
- Fortinet Certified: Getting Started in Cybersecurity 3.0
- Fortinet Certified: Introduction to the Threat Landscape 3.0
